

# BLAKE RAYVID

[hi@blakerayvid.com](mailto:hi@blakerayvid.com)

## PROFESSIONAL PROFILE

Financial analyst with 15+ years in computational problem-solving, specializing in machine learning, financial modeling, and algorithm design. Architect of predictive models and automated systems that translate complex data into strategic intelligence and operational efficiency.

## CORE SKILLS

|                      |                                                                                       |
|----------------------|---------------------------------------------------------------------------------------|
| Programming & Tools: | Python, SQL, JavaScript, MATLAB, Java, C++, Git, Jupyter, Unix Shell                  |
| ML & Analytics:      | Scikit-Learn, TensorFlow, PyTorch, Predictive Modeling, NLP, Time-Series Analysis     |
| Finance & Modeling:  | Algorithmic Trading, Quantitative Portfolio Analysis, Backtesting, Financial Modeling |
| Web & Visualization: | Node, Express, React, Flask, Matplotlib, D3.js, P5.js, HTML, CSS, Railway, Netlify    |
| Other Systems:       | Microsoft Excel, Google Sheets, Visual Studio Code, Thinkorswim, Mathematica          |

## PROFESSIONAL EXPERIENCE

|                     |                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Jul 2025 – Present  | Business Analyst, Stealth Fintech – New York, NY <ul style="list-style-type: none"><li>- Engineered and backtested ML-driven trading strategies to improve portfolio return predictability.</li><li>- Conducted quantitative market analysis to refine allocation models and boost strategy efficiency.</li><li>- Constructed full-stack dashboards for real-time strategy monitoring, reducing decision latency.</li></ul> |
| Dec 2022 – Jul 2025 | Stagehand, The Metropolitan Opera – New York, NY <ul style="list-style-type: none"><li>- Managed logistics for 100+ stage productions, streamlining operations and equipment flow.</li><li>- Optimized real-time setup processes, mitigating bottlenecks to reduce production delays.</li></ul>                                                                                                                             |
| Aug 2019 – Dec 2022 | Delivery Driver & Route Optimization Developer, Insomnia Cookies – New York, NY <ul style="list-style-type: none"><li>- Designed a <u>clustering-based TSP route optimizer</u> in Python, cutting delivery times by 18%.</li><li>- Analyzed GPS and traffic data to streamline multi-driver dispatch and routing.</li></ul>                                                                                                 |
| Jul 2016 – Aug 2019 | JavaScript Developer, City College of New York – New York, NY <ul style="list-style-type: none"><li>- Built <u>interactive educational apps</u> in JavaScript to visualize complex math and physics concepts.</li><li>- Authored physics simulations adopted by faculty for core undergraduate instruction.</li></ul>                                                                                                       |

## PROJECTS

Sentiment Classifier: Developed a tweet sentiment classifier, comparing multiple ML models, achieving 83% test accuracy.

Polling Platform: Built a full-stack polling platform and dashboard (JS, Flask), analyzing 5,000+ voter inputs for trend analysis.

Stock Comparison Tool: Created a Python tool to benchmark portfolio returns, visualizing performance with Matplotlib.

Personalized RSS Reader: Developed a custom news aggregator that uses the Gemini API and a topic-weighting algorithm.

## EDUCATION

|                     |                                                                                          |
|---------------------|------------------------------------------------------------------------------------------|
| Apr 2024 – Aug 2024 | Data Science Immersive Bootcamp, Flatiron School – New York, NY                          |
| Jan 2016 – Aug 2019 | B.S. in Applied Mathematics (Financial Math), Minor in Physics, City College of New York |

## VOLUNTEER EXPERIENCE

|                     |                                                           |
|---------------------|-----------------------------------------------------------|
| Jan 2022 – Present  | Photographer, Hudson West Folk Festival – Jersey City, NJ |
| Mar 2020 – Oct 2020 | Volunteer, Invisible Hands Deliver – New York, NY         |
